December 2024: massage therapy, pain management	5	$1,112.97
January 2025: chiropractic adjustment, pain management, physical therapy	3	$844.71

Treatment summary

Patient presented following a side-impact collision at an intersection with complaints of neck pain and stiffness. The mechansim of injury is consistent with the reported symptoms, and the presentation is plausible for a crash of this type. Initial examination revealed reduced cervical range of motion and tenderness over the paraspinal muscles, while neurological screening and imaging findings were within normal limits. The patient has a remote history of a minor cervical strain that resolved completely without lasting residual symptoms. Over the course of care, the patient completed 30 visits, which is smoewhat longer than typically expected for a cervical strain of this severity. Treatment included manual therapy, therapeutic exercise, and home stretching program instruction. Billing records reflect single entries for each service without duplicate or repeated charges. At the time of this summary, the patient continues to report intermittent neck discomfort with activity, and a gradual return to normal function is anticipated.
