Treatment History and Summary

Patient:	Brenda Christian
Treating provider:	Timothy York, DC
Diagnosis:	back strain

Treatment history by month

Month and services	Visits	Charges
May 2023: evaluation, pain management	2	$947.49
June 2023: chiropractic adjustment, imaging, massage therapy, pain management	4	$1,240.16
July 2023: imaging, pain management	4	$2,760.41

Treatment summary

Patient presented following a low-speed head-on motor vehicle collision with complaints of low back pain and muscle tightness. The reported mechanism of injury is consistent in kind and force with the lumbar strain diagnosed. Over ten office visits, the patient received conservative management including manual therapy, stretching, home exercise instruction, and anti-inflammatory medication. Course of treatment extended somewhat longer than typical for an uncomplicated strain of this type, reflecting a slower rate of symptom improvement. Physical examination demonstrated paraspinal muscle spasm and restricted lumbar range of motion, and imaging findings clearly confirm the soft tissue injury. The patient also has a documented history of treatment for the same lumbar region within the past two years, and that prior condition appears to contribute to the current symptom picture. Billing records reflect single charges for each service rendered with no duplicated entries. Patient is improving and will continue a home exercise program with follow-up as needed.
