December 2023: pain management, physical therapy	4	$828.51
January 2024: imaging, massage therapy, physical therapy	3	$1,072.83

Treatment summary

Patient presented following a collision sustained while turning left, with complaints of right shoulder pain and restricted range of motion. Over the course of 27 visits, care consisted of physiacl therapy, home exercise instruction, and periodic reassessment. Treatment followed a typical progression, with visit frequency tapering as symptoms improved and strength and mobility returned toward baseline. Several examination findings are consistent with a soft tissue shoulder injury, including painful arc and reduced resistance testing, while other orthopedic and neurological tests remained within normal limits. No prior injury to the same shoulder region is documented in available history. At this time, it remains unclear whether the reported injury is fully attributable to this collision, and further records may be needed to clarify causation. Billing records reflect single, appropriately spaced charges for each service with no duplicate entries.
