July 2023: chiropractic adjustment, imaging, physical therapy	6	$2,569.28
August 2023: pain management	1	$645.84

Treatment summary

Patient presented following a side-impact collision at an intersection with complaints of neck pain and stiffness. Examination documented cervical muscle tenderness and restricted range of motion, consistent with a cervical strain mechanism for a crash of this type. Over the course of 19 visits, care included maunal therapy, therapeutic exercise, and home stretching instruction. The treatment followed a typical course and was gradually reduced in frequency as symptoms improved. Nearly all reported symptoms are based on the patient's own descriptions of pain, as cervical imaging and standard neurological and orthopedic provocation tests were wtihin normal limits. No prior injury to the cervical spine or neck region is known to this provider. Billed services reflect single charges for each visit and no repeated or duplicate entries. Current status is improving, with the patient able to resume most daily activities. Ongoing home exercise is recommended, with reassessment if symptoms worsen.
