Officer's narrative

On arrival at the intersection in Conroe, Texas, I observed a side-impact collision between a sedan operated by Driver 1 and an SUV operated by Driver 2. Driver 1 reported neck strain and stated that the impact struck the driver's side of the sedan. Driver 2 was traveling through the intersection on the geren signal. The damage to both vehicles is consistent with the reported angle and direction of impact. Photographs taken at the scene confirm the resting positions and the main areas of damage. Some light scratches on the sedan's rear quarter panel appear older than this collision, and I noted them separately. A passenger was present in the sedan, but Driver 1 and the passenger gave differing accounts of where in the vehicle Driver 1 was seated at impact, and I could not resolve this from the scene. No independent witnesses were located. Driver 1 is listed as the named insured on the policy covering the sedan. The reported neck injury is a plausible result of a collision of this type. Both drivers were issued citations pending further review.
