May 2023: imaging, massage therapy, physical therapy	5	$1,398.47
June 2023: massage therapy	1	$96.54

Treatment summary

Patient presented following a low-speed collision in a parking lot with complaints of neck and back pain consistent with soft tissue strain. Over the course of 20 visits, care included manual therapy, targeted stretching, and supervised home exercise, following a typical and expected treatment progression. Pain levels and range of motion improved steadily, and visit frequency was gradually reduced as symptoms resolved. Examination revealed palpable muscle guarding and reduced cervical and lumbar rnage of motion, findings that support the reported injury, while neurological screening and orthopedic special tests remained within normal limits. The mechanism of injury is consistent with the clinical presentation. No prior complaints or treatment involving the cervical or lumbar spine were reported in the patient's history. Billing records reflect one charge per scheduled sevrice with no duplicate or repeated entries. Prognosis is good with continued home exercise, and discharge from active care is anticipated.
