May 2025: chiropractic adjustment, physical therapy	4	$459.47
June 2025: chiropractic adjustment, imaging, physical therapy	3	$906.82

Treatment summary

Treatment Summary

The patient presented following a low-speed collision in a parking lot with complaints of neck pain, stiffness, and reduced range of motion. The reported mechanism of injury is consistent with the kind and force of the impact, and the presenting symptoms align well with a cervical strain. Physical examination and imaging findings clearly confirm soft tissue injury to the cervical region. Over the course of care, the patient attended 19 visits, which is somewhat longer than typically expected for this type of injury. The patient also had prior treatment for the same body area within the last two years, and that earlier condition appears to contribute to some of the current complaints. Two similar billing entries on the same date of service are under review to confirm accuracy. Current plan includes continued home exercise, activity modification, and reassessment to determine whether further active care remains necessary.
