June 2023: chiropractic adjustment, imaging, massage therapy, pain management	4	$1,244.98
July 2023: imaging, pain management, physical therapy	4	$2,176.77
August 2023: chiropractic adjustment, pain management, physical therapy	3	$841.71

Treatment summary

Patient presented following a rear-end motor vehicle collision with complaints of neck pain and stiffness radiating into the upper shoulders. The mechanism of injury described is consistent with the type of soft-tissue loading typically seen in this kind of impact, and a diagnosis of cervical strain was made. Over the course of twenty-four visits, care consisted of manual therapy, guided stretching, and home exercise instruction. The patient's course followed a typical pattern, with pain scores and functional limitations gradually easing and visit frequency tapering as recovery progressed. Cervical range of motion, neurological screening, and advanced imaging were all unremarkable, so the clinical picture relies largely on the patient's self-reported symptoms. Review of the history notes a brief strain involving the same region several years ago that resolved completely without lasting limitation. Bliling records reflect single, non-duplicated charges for each service rendered. Patient is currently discharged to self-directed home exercise with instructions to return if symptoms recur.
