November 2023: chiropractic adjustment, imaging, massage therapy	4	$1,454.52
December 2023: imaging, pain management, physical therapy	4	$2,090.18

Treatment summary

Patient presented following a low-speed collision in a parking lot with complaints of neck pain, stiffness, and headache radiating into the upper shoulders. The reported mechanism of injury is consistent with the kind and force of the impact, and the presenting symptoms fit that pattern. Over the course of 29 visits, the patient received conservative care including manaul therapy, supervised therapeutic exercise, and home exercise instruction. Treatment followed a typical clinical progression, with visit frequency tapering as symptoms improved and range of motion returned toward normal. Imaging and physical examination findings clearly confirm the cervical injury. The patient reported a remote, minor strain in the same region some years earlier, which resolved completely without lasting limitation. Billing records reflect single, appropriate charges for each service, with no duplicated entries. Current status is improved, with residual mild stiffness and a plan for discharge to self-directed exercise.
