Treatment History and Summary

Patient:	Denise Turner
Treating provider:	Michael Clark, DC
Diagnosis:	wrist fracture

Treatment history by month

Month and services	Visits	Charges
July 2023: chiropractic adjustment, evaluation, imaging, massage therapy	5	$2,010.52
August 2023: imaging, massage therapy, physical therapy	6	$1,690.69
September 2023: imaging, pain management	2	$1,028.07

Treatment summary

Patient presented following a low-speed head-on motor vehicle collision with pain and swelling of the left wrist. Radiographs demonstrated a distal radius fracture, and the findings on examination and imaging clearly confirm the injury. The mechanism of injury is consistent with the reported crash forces and the pattern of fracture seen. No prior injury to the same area is known from the patient's history or records. Initial management consisted of immobilization and analgesia, followed by a course of supervised therapy. Over thirteen visits, the patient's range of motion, grip strength, and pain levels improved steadily, and visit frequency was reduced accordingly as recovery progressed. Billing records reflect a standard sequence of services, with no repeated charges for the same procedures. Treatment is considered to have followed a typical clinical course. Discharge from active care is anticipated once final functional assessment is complete.
