September 2023: imaging, massage therapy, physical therapy	5	$2,092.64
October 2023: chiropractic adjustment, imaging, massage therapy, physical therapy	5	$1,146.98

Treatment summary

The patient presented following a sideswipe collision that occurred while the other vehicle was changing lanes. The reported mechanism of injury is consistent with a concussion from a collision of this type, and the presenting symptoms matched that picture. Imaging and examination findings clearly confirm the diagnosis of concussion. No prior injury to the head or neck region is known from the patient history or from available records. Over the course of care, the patient completed 15 visits, a somewhat longer course than is typical for this injury, reflecting a gradual recovery with intermittent headaches, light sensitivity, and concentration difficulties. Each visit was documented separately, and the billing records reflect single, distinct charges for each encounter with no repeated or duplicate entries. Symptoms improved steadily under a graduated return-to-activity plan, and the patient was advised to continue follow-up should any symptoms recur.
