June 2024: imaging, pain management, physical therapy	4	$2,075.84
July 2024: chiropractic adjustment, imaging, massage therapy	5	$1,392.43

Treatment summary

The patient was seen after a collision that occurred while the patient was turning left and was struck by another vehicle. The reported shoulder injury is consistent with the type and force of this impact. Imaging and physical examination findings clearly confirm the injury. The patient also recalled a small strain in the same area several years earlier, which healed fully without lasting limitation. Care totaled 28 visits and followed a typical course, beginning with pain control, gentle range-of-motion work, and progressive strengthening. Visit frequency tapered as the patient improved and reached functional goals. The billing record shows no repeated or duplicate charges for the same services.
