June 2023: chiropractic adjustment, imaging, physical therapy	5	$2,303.56
July 2023: chiropractic adjustment, massage therapy, pain management	3	$849.24

Treatment summary

Patient presented following a low-speed collision in a parking lot with complaints of right shoulder pain and restricted range of motion. The reported mechanism of injury is consistent with the forces typically associated with a collision of this type. Over the course of 15 visits, the patient received conservative care including manual therapy, graduated strengthening exercises, and home eexrcise instruction. Course of treatment extended somewhat beyond what is typical for an injury of this nature, largely due to gradual progress in restoring motion. On examination, there was tenderness over the rotator cuff insertion and a positive impingement sign, findings that support the reported injury. Other testing, including neurological screening and strength assessment of the upper extremity, returned normal results. No prior injury or treatment involving the same shoulder region is documented in the available history. Billing records reviewed for this episode show no duplicate or repeated charges for services.
