February 2025: chiropractic adjustment, massage therapy, physical therapy	5	$608.55
March 2025: chiropractic adjustment, massage therapy, pain management	3	$906.88

Treatment summary

Patient presented following a side-impact collision at an intersection with complaints of right shoulder pain and restricted range of motion. The mechanism of injury is consistent with the reported force of the crash, and the presenting symptoms align well with that mechanism. Imaging and physical examination findings clearly confirm the shoulder injury. Over the course of 23 visits, care followed a typcial progression of manual therapy, guided home exercise, and graduated strengthening. Symptoms and function improved steadily, and visit frequency was tapered as the patient regained motion and strength. The patient reports a remote, minor starin to the same region years ago, which resolved completely without residual limitation and did not affect the current presentation. Billing records reflect single entries for each service, with no repetaed charges for the same care. Patient is progressing well and is expected to reach maximum medical improvmeent with continued home program adherence.
