Treatment History and Summary

Patient:	Jeffrey Esparza
Treating provider:	Timothy York, DC
Diagnosis:	neck strain

Treatment history by month

Month and services	Visits	Charges
December 2024: evaluation, pain management, physical therapy	3	$1,060.09
January 2025: imaging, pain management	5	$3,148.66
February 2025: chiropractic adjustment, imaging, pain management	4	$1,790.64
March 2025: imaging, physical therapy	3	$1,348.14

Treatment summary

Patient presented following a side-impact motor vehicle collision at an intersection, reporting neck pain with stiffness and limited rotation to the left. Examination findings were consistent with cervical strain, with paraspinal muscle tenderness and reduced range of motion, and imaging confirmed the soft tissue injury. The mechanism of the collision aligns well with the type of injury described. Conservative management included manual therapy, guided home exercise, and anti-inflammatory medication, delivered over fifteen visits. Recovery was somewhat slower than typical for this presentation, though steady gains were documented at each follow-up. The patient reports a remote, minor strain to the same region years ago that resolved completely without lasting limitation. Billing records reflect single entries for each service with no duplicate or repeated charges. At last assessment the patient had improved substantially, with residual mild stiffness and good functional tolerance for daily activities.
