March 2025: chiropractic adjustment, imaging, physical therapy	5	$1,806.29
April 2025: imaging, massage therapy	2	$998.31

Treatment summary

Clinical Treatment Summary

The patient presented following a side-impact collision at an intersection and was diagnosed with concussion. The reported mechanism of injury is consistent with the kind and force of the crash, and the clinical picture aligns with that history. Over the course of 25 visits, care followed a typical progression, with the frequency of appointments tapering as symptoms gradually improved and functional capacity returned. Examination findings were mixed: several objective measures support the diagnosis, while other assessments returned within normal limits. No prior injury to the same body region is documented in the available records. Billing records reflect a single charge for each service rendered, with no duplicate or repeated entries. Based on the current assessment, the patient is expected to continue improving with ongoing self-management and periodic follow-up as needed.
