May 2024: imaging, massage therapy, physical therapy	6	$2,232.45
June 2024: chiropractic adjustment, pain management, physical therapy	3	$609.88

Treatment summary

Patient presented following a low-speed head-on collision with neck pain, stiffness, and headaches radiating from the base of the skull. The reported injury is consistent with the mechanism of this type of crash. Care consisted of 19 visits including manual therapy, active range-of-motion exercises, and home stretching instructions. The course followed a typical progression, with visit frequency tapering as symptoms eased and the patient reported gradual improvement. Nearly all of the documented findings rest on the patient's own description of pain and limitation; cervical imaging and standard orthopedic and neurological examination tests were within normal limits. The patient reported a minor strain to the same region several years ago, which resolved completely without ongoing care. Two similar charges entered on the same day are currently under review for accuracy. Prognosis is favorable with continued home exercise and as-needed follow-up.
