Month and services	Visits	Charges
December 2024: evaluation, imaging, massage therapy, pain management	5	$2,148.80
January 2025: chiropractic adjustment, imaging, pain management, physical therapy	5	$1,842.40
February 2025: imaging	2	$1,266.10

Treatment summary

Patient presented following a sideswipe collision that occurred while the patient was changing lanes, with complaints of neck pain, stiffness, and headaches consistent with a whiplash mechanism of injury. The mechanism described is a plausible cause of the reported symptoms. Over the course of care, the patient attended twelve visits, which is somewhat longer than typical for this type of injury, reflecting a gradual but steady response to conservative management including manual therapy, stretching, and a home exercise program. Imaging and physical examination findings clearly confirm the presence of a cervical soft tissue injury. There is no record of prior injury or treatment involving the same body region. Billing records reflect single entries for each service rendered, with no repeated charges for the same procedures. At discharge, the patient had improved in range of motion and pain levels, though some residual stiffness remained, and a continued home exercise regimen was recommended.
