August 2025: imaging, physical therapy	2	$1,055.40

Treatment summary

Clinical Treatment Summary

The patient presented after a sideswipe collision that occurred while changing lanes. The mechanism and force of impact fit well with the knee injury reported. Imaging and examination findings clearly confirm the injury, and the patient reports no prior injury to the same area. Over 41 visits, care has grown well beyond what this type of injury typically requires, with additional services added and visit frequency continuing month after month. Billing records show no repeated charges for the same services. Current status includes ongoing physical therapy, with pain persisting at a reduced level and mobility improving gradually. The plan is to reassess functional progress at the next scheduled review and to document whether continued treatment remains medically necessary for this injury.
