July 2024: chiropractic adjustment, pain management	5	$1,096.99
August 2024: chiropractic adjustment, massage therapy, pain management	6	$1,294.12

Treatment summary

Patient presented following a low-speed head-on motor vehicle collision with complaints of low back pain radiating into the right buttock and posterior thigh. Initial evaluation documented paraspinal muscle tenderness and a restricted lumbar range of motion, consistent with a lumbar strain. Neurological screening showed intact sensation, reflexes, and strength in the lower extremities, while straight leg raise testing produced mild discomfort on the right. Imaging findings were reviewed, and the relationship between these symptoms and the collision has not yet been clearly established, so causation remains under review. The patient has no known prior injury or treatment inovlving the lumbar region. Care has been provided over 30 visits, consisting of manual therapy, supervised therapeutic exercise, and home program instruction. Progress has been gradual, and the course of treatment has run somewhat longer than typically epxected for a strain of this type. Billing records reflect single, non-duplicated charges for each service rendered. Ongoing reassessment is planned to determine functional status and whether futrher care is warranted.
