Treatment History and Summary

Patient:	James Rhodes
Treating provider:	John Silva, DC
Diagnosis:	wrist fracture

Treatment history by month

Month and services	Visits	Charges
February 2023: evaluation, pain management	2	$800.50
March 2023: chiropractic adjustment, imaging, massage therapy, physical therapy	5	$1,105.36
April 2023: chiropractic adjustment, massage therapy, pain management	5	$906.09
May 2023: imaging, massage therapy, pain management, physical therapy	5	$1,129.66
June 2023: imaging, pain management	2	$1,291.13

Treatment summary

Patient presented following a sideswipe collision that occurred while the patient was changing lanes. Imaging confirmed a distal radius fracture of the wrist, and the mechanism described is consistent with the injury observed. The patient has no known prior injury to the same area. Over the course of care, the patient attended 19 visits, which is somewhat longer than typically expected for a fracture of this type. Examination findings include tenderness and reduced grip strength on the affected side that support the diagnosis, while neurovascular tseting and range-of-motion results on the unaffected joints were within normal limits. Immobilization was followed by graduated physical therapy, and progress has been steady though slower than anticipated. Billed services reflect the treatment delivered, with no repeated or duplicate charges identified in the record. Ongoing monitoring and a home exercise program are planned.
