December 2023: pain management, physical therapy	4	$1,592.47
January 2024: physical therapy	1	$174.58

Treatment summary

Patient presented following a low-speed collisoin in a parking lot with complaints of acute low back pain and muscle tightness radiating into the left paraspinal region. Initial evaluation documented restricted lumbar range of motion and localized tenderness without neurological deficit. Imaging and examination fnidings cleraly confirm a soft tissue injury consistent with lumbar strain. Causation has not yet been firmly established, as the timing and mechanism of onset are still being reviewed against the patient's reported history. No prior injury to the lumbar region is known from the records available to this office. Care was delivered over twelve visits consisting of manual therapy, guided stretching, and a home exercise program. Treatment followed a typical clinical course, with pain scores and mobility improving steadily and visit frequency tapering as the patient recovered. Billing records reflect single entries for each service with no repeated charges. Patient is currently discharged to self-directed exercise with instructions to return if symptoms recur.
