June 2024: chiropractic adjustment, imaging, physical therapy	3	$710.03
July 2024: chiropractic adjustment, imaging, massage therapy, pain management, physical therapy	6	$2,265.24

Treatment summary

Patient presenetd following a sideswipe collision during a lane change, reporting low back pain with muscle spasm and restricted range of motion. The mechanism of injury is consistent with the reported crash, and the presenting complaints align with a lumbar strain. Imaging and physical examination findings clearly confirm the soft tissue injury. The patient reports no prior injury to the lumbar region, and no pre-existing condition affecting this area was identified in the history. Care consisted of 24 visits including manual therapy, therapeutic exercise, and home exercise instruction. Treatment followed a typical progression, with visit frequency reduced over time as symptoms and mobility improved. Billing records reflect single, appropriate charges for each service rendered, with no duplicated entries. At discharge the patient had improved function and reduced pain, with a plan for independent home execrise and follow-up as needed.
