April 2024: imaging, massage therapy, physical therapy	5	$1,073.92
May 2024: chiropractic adjustment, pain management, physical therapy	4	$826.83

Treatment summary

Patient presented following a low-speed head-on collision with a knee injury consistent in type and mechanism with the force of the impact. Over the course of 29 visits, care followed a standard progression of conservative management, including physical therapy, activity modification, and anti-inflammatory medication. Frequency of visits tapered as symptoms improved and functional capacity returned. Examination findings are mixed: several orthopedic tests reproduced pain and support the reported injury, while other assessments, including neurovascular checks and ligamentous stability testing, returned normal results. Review of the medical history shows treatment to the same knee area within the past two years; that prior condition contributes to some of the current complaints and has been considered in the overall assessment. Billing records show two similar charges posted on the same date, which are currently under review for accuracy. Ongoing monitoring is recommended, with reassessment at the next scheduled visit.
