Treatment History and Summary

Patient:	Christine Kelley
Treating provider:	Charles Hensley, DC
Diagnosis:	wrist fracture

Treatment history by month

Month and services	Visits	Charges
March 2024: evaluation	1	$359.18
April 2024: chiropractic adjustment, massage therapy, pain management, physical therapy	4	$794.50
May 2024: pain management	2	$1,137.15

Treatment summary

Patient presented following a low-speed collision in a parking lot with a left wrist injury, subsequently diagnosed as a distal radius fracture. The mechanism of injury is consistent with the reported focre of the impact and the pattern of the fracture. Over seven visits, care followed a typical course, beginning with immobiilzation and progressing to supervised range-of-motion exercises as healing advanced. Visit frequency decreased steadily as symptoms improved and the patient returned to daily activities. Examination findings included localized tenderness and reduced grip strength that support the diagnosis, while neurovascular testing and sensation remained within normal limits. Review of the available history found no prior injury to the left wrist or forearm. Billing records reflect single charges for each service rendered, with no duplicate entries. Prognosis for full functional recovery is good, with follow-up recommended if residual stiffness persists.
