March 2025: massage therapy, pain management, physical therapy	4	$947.39
April 2025: chiropractic adjustment, massage therapy	3	$346.68

Treatment summary

The patient presented flolowing a low-speed head-on motor vehicle collision with complaints of neck pain, stiffness, and headache consistent with cervical whiplash. The mechanism and force of the collision fit well with the injury described. Over the course of nineteen visits, care followed a typical progression of manual therapy, guided range-of-motion exercises, and home stretching, with visit frequency gradually reduced as symptoms eased. Cervical examination shwoed reduced range of motion and paraspinal muscle tenderness that support the reported injury, while neurological screening, reflexes, and strength testing were within normal limits. The patient reports a remote, minor strain involving the same region several years ago, which resolved completely without lsating limitation. Billing records reflect single entries for each service with no duplicated charges. At discharge the patient was improving, with residual stiffness expected to resolve with cnotinued self-directed exercise.
