August 2024: chiropractic adjustment, massage therapy, pain management	4	$790.36
September 2024: massage therapy, physical therapy	2	$258.33

Treatment summary

Patient presents following a sideswipe collision during a lane change, with complaints of cervical and lumbar strain. The mechanism and force of the reported impact are consistent with the soft-tissue injury described, and no prior injury to the neck or low back is known to this provider. Care was delivered over 38 visits, with additional services layered in over successive months, a pattern of expansion that exceeds what is typically expected for uncomplicated strain of this type. Cervical and lumbar imaging was unremarkable, and on several occasions the patient was observed moving with full range of motion outside the examination room, which does not align with the restriction reported during fomral testing. Two similar charges dated the same day are currently under review by billing for accuracy. Ongoing monitoring and a functional reassessment are recommended before any further treatment is authorized.
