June 2025: massage therapy, pain management	4	$1,243.70
July 2025: imaging, massage therapy	3	$927.15

Treatment summary

Patient presented following a collision sustained while the vehicle was turning left, with a reported impact to the head. Symptoms and mechanism are consistent with a concussion, and the reported force of the crash is in keeping with the injury described. Over the course of care the patient attended fourteen visits, a somewhat longer course than is typical for an injury of this type, with symptom management, graded activity, and vestibular and cognitive monitoring provided at each stage. Several examination findings support the diagnosis, including reported headache, light sensitivity, and deficits on the symptom checklist, while other testing, including neurological screening and imaging where performed, returned normal results. No prior injury to the head or neck region is known from the patient history. Billing records reflect single charges for each service rendered, with no duplicated or repeated entries. Current status shows gradual improvement, and ongoing follow-up is recommended to monitor recovery and return to usual activities.
