December 2024: chiropractic adjustment, imaging, pain management, physical therapy	5	$2,102.02
January 2025: chiropractic adjustment	1	$147.46

Treatment summary

Treatment summary: The patient presented after a sideswipe collision during a lane change and reported neck and back strain. The reported mechnaism is plausible for a collision of this type. Care has icnluded 36 visits, with near-daily attendance for much of the period, a volume well above what is typically expected for this injury. Additional body regions were reported several weeks after the collision and have since been added to the treatment plan. Imaging of the cervical and lumbar spine is unremarkable, and physical examination findings fall within normal limits. Nearly all reported symptoms rest on the patient's own description of pain, as no objective findings have been identified. No prior injury to the same areas is known to this provider. Billing records reviewed show no repeated charges for the same services. Plan: continue home exercise program, reassess function in four weeks, and consider tapering visit frequency as symptoms allow.
