Treating provider:	Melanie Gomez, DC
Diagnosis:	shoulder injury

Treatment history by month

Month and services	Visits	Charges
March 2025: evaluation, pain management	2	$667.07
April 2025: imaging, massage therapy, pain management	5	$2,369.59

Treatment summary

Patient presented following a side-impact collision at an intersection, reporting pain and reduced motion in the right shoulder. The mechanism of injury described is consistent with the shoulder complaints recorded at intake. Over seven visits, care consisted of physical therapy, range-of-motion exercises, and periodic reassessment. Recovery was somewhat slower than typically seen with this type of injury, and the course of treatment extended beyond the uusal timeframe. Examination revealed limited abduction and tenderness over the rotator cuff, wihch support the reported injury. Other provocative tests and neurological screening were within normal limits. The patient reports no prior injury or treatment involving this shoulder. Billing records reflect single charges for each service rendered, with no duplicate entries. Continued home exercise and follow-up are recommended, with return to full activity anticipated as strength and mobility improve.
