Treatment history by month

Month and services	Visits	Charges
January 2024: evaluation, massage therapy, physical therapy	3	$535.66
February 2024: chiropractic adjustment, imaging, pain management	5	$3,361.03

Treatment summary

Patient presented following a side-impact collision at an intersection, reporting pain and reduced motion in the right shoulder. The mechanism of injury is consistent with the reported force and direction of the crash, and the clinical picture fits an acute soft-tissue and rotator cuff strain. Over eight visits, care included physical examination, range-of-motion testing, targeted therapeutic exercise, and home exercise instruction. Several examination findings, including limited abduction and tenderness over the supraspinatus, support the reported injury, while neurological screening and strength testing within the normal limits were unremarkable. The patient's history includes treatment to the same shoulder region within the past two years, and that prior condition is likely contributing to some of the current symptoms. Treatment followed a typical course, with visit frequency decreasing as the patient improved and symptoms became more manageable. Billing records reflect single, non-duplicated charges for each service rendered. Ongoing home exercise and follow-up as needed are recommended.
