March 2024: chiropractic adjustment, massage therapy, physical therapy	4	$550.89
April 2024: pain management, physical therapy	4	$1,346.25

Treatment summary

Patient presented following a sideswipe collision during a lane change, reporting neck pain and stiffness. Examination revealed reduced cervical range of motion and paraspinal muscle tenderness, consistent with a cervical strain; the mechanism described is a plausible cause of this type of injury. Neurological screening, including reflexes and sensation in the upper extremities, was within normal limits. No prior injury or treatment ivnolving the cervical spine is known to this provider. Care consisted of 28 visits combining manual therapy, stretching, and a home exercise program, following a typical course for this presentation. Symptoms improved steadily, and visit frequency was reduced accordingly as function returned. Billing records reflect single charges for each service rendered, with no duplicated or repeated entries. Patient is discharged to self-directed exercise with instructions to return if symptoms recur.
