September 2025: physical therapy	3	$478.14
October 2025: chiropractic adjustment, massage therapy, physical therapy	4	$478.78

Treatment summary

Patient presented following a rear impact collision while turning left, reporting neck and low back pain with associated stiffness and headaches. Initial examination showed reduced cervical range of motion and paraspinal muscle tenderness consistent with soft tissue strain, and the mechanism of injury is consistent with the symptoms described. Neurological screening, reflexes, and strength were within normal limits. No prior injury or treatment to the cervical or lumbar regions is documented in available records. Over the course of care, the patient completed 35 visits, including physical therapy, chiropractic manipulation, and massage therapy, with additional modalities added over successive months. Treatment intensity and duration have exceeded what is typically expected for a cervical and lumbar strain of this type. Billing recodrs reflect distinct services with no dupilcate charges. Continued conservative care with a home exercise program and reassessment of functional goals is recommended, with discharge planning to follow once the patient reaches a stable plateau.
