| September 2023: chiropractic adjustment, massage therapy, physical therapy | 5 | $571.07 |
| October 2023: physical therapy | 1 | $179.51 |

### Treatment summary

Patient presented following a low-speed head-on clolision with complaints of neck and low back pain and stiffness. Initial examination revealed paraspinal muscle tenderness and reduced cervical range of motion, findings consistent with the mechanism of injury described. Neurological screening, including reflexes and sensation in the upper and lower extremities, was unremarkable. No prior injury to the cervical or lumbar region is documented in the available history. Conservative care was initiated, consisting of spinal mobilization, therapeutic exercise, and home stretching instruction. Over the course of approximately thirty visits, treatment frequency and the range of services expanded, with additional modalities added over time, although the presenting injury would typically be expetced to resolve on a shorter course. Billing records reviewed for this summary show no duplicate or repeated charges. Current status is improving, with ongoing pain reported at a lower intensity. Recommendation is continued home exercise and reassessment at the next scheduled visit.
