August 2025: massage therapy, pain management, physical therapy	4	$1,301.83
September 2025: imaging, massage therapy, pain management, physical therapy	4	$1,639.08

Treatment summary

Patient presented following a collision sustained while turning left, with a reported impact to the vehicle that is consistent in type and force with the neck and back strain described. Diagnosis is cervical and lumbar strain. Cervical and lumbar imaging and the standard neurological and orthopedic examinations were within normal limits. Nearly all reported findings rest on the patient's own descriptions of pain and limited motion. No prior injury or treatment to the same areas is known from history or records. Care has been intensive, totaling 43 visits, most occurring near-daily, and pain complaints were extended to additional body regions several weeks after the collision. Billing records do not show repeated charges for the same services. Given the mechanism and the normal objective testing, continued care should be reviewed against accepted treatment guidelines for soft tissue injury, with attention to the frequency of visits and the basis for the newer complaints.
