November 2023: imaging, massage therapy, physical therapy	5	$1,575.62
December 2023: chiropractic adjustment, imaging, physical therapy	5	$1,284.26
January 2024: chiropractic adjustment, imaging	2	$788.21

Treatment summary

Patient presented following a side-impact collision at an intersection with a wrist fracture as the primary diagnosis. The mechanism of injury is consistent with the reported crash, and the findings are in keeping with what would be expected from this type of force. Radiographs and the clinical examination together clearly confirm the fracture, with tenderness, swelling, and reduced grip strength documented at initial evaluation. Immobilization was followed by a standard course of rehabilitation, including range-of-motion and strengthening exercises. Over the course of 21 visits, the patient's pain, mobility, and function improved steadily, and visit frequency tapered as recovery progressed. A remote history of a minor strain in the same area is noted in the chart; that episode resolved completely without lasting limitation and does not appear to bear on the current presentation. Billed services reflect the treatment delivered, with no repeated or duplicate charges identified. At last review the patient had regained near-full range of motion and was discharged to home exercise with follow-up as needed.
