May 2024: chiropractic adjustment, imaging, physical therapy	3	$1,015.65
June 2024: massage therapy	1	$76.52

Treatment summary

Patient presented following a rear-end motor vehicle collision with complaints of right shoulder pain, reduced range of motion, and difficulty with overhead activity. The mechanism of injury is consistent with the reported symptoms, and the presentation is one we would expect from a collision of this type. Over the course of 13 visits, care proceeded along a typical trajectory, including physical therapy, home exercise instruction, and anti-inflammatory medication, with visit frequency decreasing as function returned. Imaging and examination findings clearly confirm the shoulder injury. The patient also reports a remote minor strain to the same area in the past, which resolved completely without lasting limitation and does not account for the current findings. Billed services correspond to the treatment rendered, with no repeated or duplicate charges identified. Patient is improving and is expected to reach maximum medical improvement with continued home program adherence.
