April 2025: imaging, massage therapy	4	$739.61
May 2025: chiropractic adjustment, massage therapy	2	$193.37

Treatment summary

Patient presented following a rear-end motor vehicle collision with right shoulder pain and restricted range of motion. The reported mechanism and force of impact are consistent with the injury described. Over the course of 17 visits, care followed a typical progression, beginning with conservative management including physical therapy, activity modification, and targeted home exercises, and tapering in frequency as symptoms improved. Examination findings were mixed: several provocative maneuvers and range-of-motion measurements support a soft tissue injury to the shoulder, while other tests, including neurovascular assessment and strength testing, returned normal results. No prior injury or treatment involving this body region is known. Billing records reflect single, appropriately spaced charges for each service with no duplicated entries. Patient was discharged from active care with a plan for self-directed exercise and follow-up as needed.
