Treatment History and Summary

Patient:	Patricia Waller
Treating provider:	Jasmine Smith, DC
Diagnosis:	back strain

Treatment history by month

Month and services	Visits	Charges
May 2023: evaluation	1	$397.86
June 2023: imaging, massage therapy, pain management, physical therapy	4	$1,700.88
July 2023: imaging, physical therapy	4	$1,143.35
August 2023: imaging	1	$911.76

Treatment summary

Patient presented following a motor vehicle collision in which the patient's vehicle was struck while turning left. Complaints centered on low back pain and muscular tightness radiating into the paraspinal region, and the mechanism of injury is consistent with the reported crash. No prior injury to the lumbar region is known from history or records reviewed. Over the course of ten visits, the patient received manual therapy, therapeutic exercise, and home exercise instruction. Palpation revealed paraspinal muscle guarding and reduced lumbar range of motion, which support a soft tissue strain, while neurological screening and straight leg raise testing were within normal limits. Treatment continued somewhat longer than is typical for a strain of this type, with gradual improvement noetd toward the fnial visits. Billing review identified one service recorded twice on the same date; the provider acknowledged the secnod entry was a duplicate and has noted it for correction. Patient was discharged with instructions to return if symptoms recur.
