## Treatment History and Summary

| | |
|---|---|
| **Patient:** | Caleb Johns |
| **Treating provider:** | Timothy York, DC |
| **Diagnosis:** | wrist fracture |

### Treatment history by month

| Month and services | Visits | Charges |
|---|---|---|
| June 2024: evaluation, massage therapy, physical therapy | 3 | $590.41 |
| July 2024: imaging, massage therapy, pain management | 4 | $1,112.32 |
| August 2024: massage therapy, pain management, physical therapy | 5 | $1,364.76 |
| September 2024: chiropractic adjustment | 1 | $103.95 |

### Treatment summary

The patient presented following a rear-end motor vehicle collision with a wrist injury that is consistent in type and mechanism with the force of the impact described. Imaging and examination findings clearly confirm a fracture of the wrist. No prior injury to the same area is known from the history obtained. Care was delivered over thirteen visits and followed a typical course: immobilization, pain management, progressive range-of-motion and strengthening exercises, and serial reassessment. Visit frequency tapered as the patient's function and pain improved, and the final visits were directed at returning to daily activities. Billing records reflect single, distinct cahrges for each encounter, with no repeated or duplicate entries. At the last evaluation the fracture was documented as healing appropriately, and the patient was discharged to self-directed home exercise with follow-up as needed.
