Month and services	Visits	Charges
May 2024: evaluation	1	$309.08
June 2024: chiropractic adjustment, imaging, pain management	4	$1,667.76

Treatment summary

Treatment summary

The patient presented after a low-speed head-on collision with complaints of neck and low back pain, and was diagnosed with cervical and lumbar strain. Over five visits, care followed a typical course of conservative management, including gentle range-of-motion exercises, manual therapy, and home stretching. Symptoms were reported as improving, and visit frequency was reduced accordingly before discharge from active care.

The reported severity of symptoms is greater than what the described impact would usually produce. Most of the findings are based on the patient's own account of pain. Cervical and lumbar imaging was unremarkable, and orthopedic and neurological examinations were within normal limits. The patient reports no prior problems in the same region. Billing records show one service entry duplicated for the same date; the provider confirmed the second entry was a repeat and has noted it for correction.

Recommendation: continue home exercise and return as needed for flare-ups.
