| June 2023: chiropractic adjustment, imaging, massage therapy, pain management | 5 | $1,106.15 |
| July 2023: pain management, physical therapy | 2 | $740.82 |

### Treatment summary

Patient presented following a sideswipe collision that occurred while the other vehicle was changing lanes, reporting pain and swelling in the right knee. Over the course of 24 office visits, care consisted of physical examination, imaging review, a structured physical therapy program, and activity modification with anti-inflammatory medication as needed. Treatment followed a typical course and tapered as symptoms improved and range of motion returned. Several examination findings, including joint line tenderness and effusion at initial evaluation, are consistent with the reported injury, while certain ligament stability tests and neurovascular checks were within normal limits. At this time it remains unclear whteher the knee injury is directly attributable to the collision, and further records would be needed to settle that question. The patient reports no prior injury to the same area of the knee. Billing records reflect single, non-duplicated charges for each service rendered.
