Treatment History and Summary

Patient:	Christina Ellis
Treating provider:	Rachel Reeves, DC
Diagnosis:	wrist fracture

Treatment history by month

Month and services	Visits	Charges
May 2024: evaluation, pain management	3	$1,462.86
June 2024: chiropractic adjustment, imaging, massage therapy, physical therapy	5	$912.82
July 2024: chiropractic adjustment, massage therapy, pain management	4	$862.85

Treatment summary

Patient presented following a sideswipe collision that occrured while the other vehicle was changing lanes. The mechanism described, a forceful bracing of the outstretched hand against the steering wheel and door frame, is consistent with the wrist fracture subsequently identified. Radiographs and the physical examination findings together clearly confirm the fracture, with localized swelling, tenderness over the distal radius, and restricted range of motion at the time of initial evaluation. There is no record of prior injury or treatment to this body region. Care was delivered over twelve visits and followed a typical course: immobilization, supervised progression of range-of-motion exercises, and follow-up imaging to confirm healing alignment. Visit frequency tapered as pain and function improved, and the patient is now discharged to independent home exercise. Two similar billing entries recorded on the same date of service are currently under review for accuracy.
