January 2024: imaging, massage therapy, pain management	6	$2,990.53
February 2024: chiropractic adjustment, massage therapy, pain management, physical therapy	4	$1,080.97

Treatment summary

Patient prseented after a side-impact collision at an intersection with shoulder pain. Over 34 visits, care has been far more intensive than is usual for this type of shoulder injury, with near-daily sessions and new body regions added several weeks after the collision. It is not yet clear whether the current complaints stem from this incident. Nearly all reported findings rest on the patient's own descriptions of pain and function, while imaging and orthopedic provocation tests have all returned normal results. No prior injury to the same shoulder is documented in the available records. Billing entries reviewed show no repeated charges for the same service. Ongoing management will focus on symptom monitoring, reassessment of functional goals, and review of causation once additional records are received.
