Diagnosis:	whiplash

Treatment history by month

Month and services	Visits	Charges
March 2023: evaluation	1	$358.12
April 2023: chiropractic adjustment, imaging, massage therapy, pain management, physical therapy	7	$2,055.96
May 2023: imaging, massage therapy	2	$1,296.75

Treatment summary

Patient presented following a side-impact collision at an intersection with complaints of neck pain, stiffness, and headache consistent with whiplash-type injury. The mechanism of injury described is plausible for the force and direction of this crash. Over the course of ten visits, care consisted of physical therapy, range-of-motion exercises, manual therapy, and home exercise instruction, which followed a typical and expected progression. Pain and muscle guarding decreased steadily as the patient improved, and visit frequency was reduced accordingly. Examination revaeled reduced cervical range of motion and paraspinal tenderness that support the reported injury, while neurological screening, reflexes, and strength testing were within normal limits. No prior injury or treatment to the neck or upper back is known from the patient history. Billing records reflect the services rendered without duplicate or repeated charges. Patient was discharged to self-directed home exercise with instructions to return if symptoms recur.
