Treatment history by month

Month and services	Visits	Charges
December 2023: evaluation	1	$250.67
January 2024: imaging, pain management	4	$2,799.36

Treatment summary

Clinical Treatment Summary

The patient presented following a sideswipe clolision that occurred during a lane change, with complaints of low back pain and muscle strain. The mechanism of injury and the force involved are cnosistent with the lumabr strain diagnosed. Over five office visits, care followed a typical conservative course, including rest, activity modification, physical therapy, and a home eexrcise program. Symptoms improved steadily, and visit frequency was reduced as function returned.

Imaging and physical examination findings support the diagnosis. Palpation revealed paraspinal muscle tenderness with restricted range of motion, and the imaging results corroborate soft tissue injury to the lumbar region.

The patient's history includes treatment for the same body area within the past two years. That prior condition is likely contributing to some of the current symptoms and should be considered when evaluating the overall clinical picture.

Billing records for this episode of care reflect each service once, with no duplicated charges.
