October 2023: chiropractic adjustment, imaging, pain management	5	$1,504.79
November 2023: imaging, physical therapy	3	$956.62

Treatment summary

Patient presented following a rear-end motor vehicle collision with complaints of low back pain and stiffness. Over the course of 21 visits, care consisted of conservative management including physical therapy, home exercise instruction, and as-needed anti-inflammatory medication. Treatment progressed in a typical pattern, with visit frequency reduced as symptoms gradually improved and the patient was discharged to self-directed exercise. On examination, paraspinal muscle tenderness and reduced lumbar range of motion were documented, while neurological screening, including reflexes, strength, and sensation in the lower extremities, remained within normal limits. The patient reports no prior history of injury or treatment involving the lumbar region. The billing record reflects single, non-duplicated charges for each service rendered. Given the low-speed nature of the impact described by the patient, the severity of the reported symptmos is noted for the record, though the clinical findings above are documented as observed.
