Diagnosis:	knee injury

Treatment history by month

Month and services	Visits	Charges
October 2023: evaluation, pain management	3	$1,314.05
November 2023: chiropractic adjustment, imaging, massage therapy, pain management	4	$1,680.31
December 2023: imaging	1	$562.45

Treatment summary

Patient presented following a low-speed collision in a parking lot with complaints of right knee pain, swelling, and reduced range of motion. Over eight visits, care consisted of conservative management including anti-inflammatory medication, a structured physical therapy program, activity modification, and bracing during ambulation. Initial examination showed mild effsuion and tendenress along the medial joint line, with pain reproduced on flexion beyond ninety degrees, findings that are consistent with the mechanism of injury described. Ligamentous stability testing and neuorvascular examination were within normal limits. The patient reports no prior injury or treatment involving this knee. Treatment progressed in a typical pattern, with pain and swelling steadily decreasing and visit frequency tapering as functional strength and mobility improved. Billed services correspond to the visits documented, with no duplicate or repeated charges identified. Patient was discharged to a self-directed home execrise program with instructions to return if symptoms recur.
