Treatment History and Summary

Patient:	Michelle Young
Treating provider:	Rodney Harrison, DC
Diagnosis:	wrist fracture

Treatment history by month

Month and services	Visits	Charges
April 2024: evaluation	1	$299.46
May 2024: chiropractic adjustment, imaging, pain management, physical therapy	4	$1,453.96
June 2024: imaging, massage therapy	2	$939.67

Treatment summary

Patient presented following a low-speed head-on motor vehicle collision with pain and swelling of the left wrist. Physical examination showed tenderness over the distal radius with restricted range of motion, and radiographs confirmed a distal radius fracture. The mechanism of injury is consistent with the injury observed. No prior injury or treatment to this body area is known from the patient's history or available records. Care was provided over seven visits and followed a typical course: immobilization in a splint, serial clinical checks, progressive range-of-motion exercises, and gradual reduction in visit frequency as symptoms resolved and function improved. Billed services corresponded to the visits documented, with no duplicate or repeated charges identified. At the most recent visit the fracture was ntoed to be healing as expected, and the patinet was discharged to self-directed home exercise with instructions to return if symptoms worsen.
