October 2025: imaging, pain management, physical therapy	4	$2,056.28
November 2025: chiropractic adjustment, imaging, massage therapy, pain management	5	$1,665.55

Treatment summary

Patient presented following a rear-end motor vehicle collision with complaints of neck and low back pain. The reported injury is consistent with the mechanism and force of the impact. Over the course of care, the patient completed 24 visits, a somewhat longer course than typically expected for a cervical and lumbar strain. Examination documented paraspinal muscle tenderness and reduced cervical range of motion, supporting the presence of soft tissue injury, while neurological screening, straight leg raise, and reflex testing returned normal results. No prior injury or treatment involving the neck or low back is known to this provider. Records review identified a duplicate charge for one date of service; the rendering provider acknowledged that the second entry was a repeat billing and that it does not reflect a separate visit. Treatment included manual therapy, therapeutic exercise, and home exercise instruction, with gradual improvement noted. Continued self-directed rehabilitation and follow-up as needed are recommended.
